

Forensic Attribution of CarPlay-Initiated Calls via iOS Unified Logs

Florian Champalou - Forensic Digital Expert

INTRODUCTION

In France, holding a mobile phone while driving is **prohibited by the law**, whereas the use of in vehicle infotainment (IVI) systems such as Apple CarPlay is **legally permitted**, provided that the handset is not physically manipulated while driving.

In the context of road traffic accident investigations, mobile forensic examinations commonly rely on call history artifacts to determine whether a call was placed at the time of the incident. However, while these artifacts indicate the occurrence and timing of outgoing calls, they do not provide accurate information on the interaction method used to initiate these calls.

As a result, calls initiated through Apple CarPlay may be misclassified as illegal handheld phone use.

This study explores the forensic potential of iOS Unified Logs for distinguishing calls initiated directly on the handset from those initiated via the Apple CarPlay interface.

METHODS

- ❖ An **iPhone 13** was connected via USB using a Lightning cable to a **CarPlay-enabled vehicle**, and **Unified Logs** were acquired in **tracev3 format** using a **macOS system** (Tahoe) with the apple device in an unlocked state.
- ❖ The extracted logs were analyzed using the macOS Console and correlated with outgoing call events.
- ❖ The analysis focused on identifying CarPlay session initialization, detecting user interactions on the vehicle's CarPlay dashboard, filtering logs by timeline, and linking these events to the launch of the Phone app and call initiation.

CARPLAY INTERACTION

In this study, the iPhone was connected to the vehicle via USB.

COLLECTING DEVICE LOGS

Collect iOS Unified Logs with a single Terminal command

```
log collect --device "DEVICE_NAME" -output ~/Desktop/unified_logs.logarchive
```

KEY FORENSIC EVIDENCE

CarPlay Session Activation

```
2026-01-24 08:27:00.000000+0100 kernel AppleUSBHostPort::cableChangeOccurred : powering on
2026-01-24 08:27:01.214532+0100 CarPlay ACCCarPlayService Connecting to CarKit Connection Time
2026-01-24 08:27:02.889417+0100 CarPlay Beginning session
```

Confirms active CarPlay connection prior to the call.

User Interaction via Vehicle Interface

```
2026-01-24 08:55:21.102348+0100 CarPlay Touch input detected on CarPlay screen
2026-01-24 08:55:21.245917+0100 UIKit CarPlay Touches began with event: UITouch type: Direct
2026-01-24 08:55:21.246108+0100 UIKit window: Dashboard.DBDashboardMainWindow
2026-01-24 08:55:21.246319+0100 UIKit frame = (0 0; 406 244)
2026-01-24 08:55:21.389552+0100 CarPlay Allowing tap for icon view 'com.apple.mobilephone'
```

User tap detected on Phone app via CarPlay.

Call Initiation

```
2026-01-24 08:55:28.512734+0100 CarPlay app<com.apple.mobilephone> has an outgoing endpoint
2026-01-24 08:55:29.087456+0100 CallServicesd Call started outgoing
2026-01-24 08:58:47.339812+0100 CommCenter CallState: Voice Call ended
```

These logs show that the Phone app was launched via CarPlay, an outgoing call was initiated, and the call ended

TAKEAWAY MESSAGE

iOS Unified Logs are a valuable forensic data source.

They can be easily acquired via macOS Terminal and provide insights into user behavior and system interactions. Incorporating them into mobile forensic workflows helps distinguish legal vehicle system use from illegal phone manipulation during traffic investigations.
